<u>Richard Reed</u> Regional Supervisor	<u>10/15/87</u> Date
<u>STS</u>	<u>11/17/87</u>
<u>FI</u> Drafted	<u>11/12/87</u> Date

Species	Date(s) Observed	Spawning	Rearing	Migration
Trib → Pink Salmon	10/9/87	X		X
Main stream	has already been documented as spawning and rearing stream for pink, chum, and coho salmon			

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

Stream is mislabeled on map and is actually a main stream and tributary (see attached) draining separate watersheds.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.

SUBJECT: Anadromous Stream  
Catalog

A recent habitat issue has revealed an error in the current edition of the anadromous stream catalog. The error concerns Herring Cove Creek, known to us as 101-45-007 and listed in the catalog as 101-45-10070 (Ketchikan B-6).

The stream, which appears to be misplaced on the topographical map, has a tributary which also contains anadromous fish, mainly pink salmon. In the stream catalog, the line depicting the stream is actually a combination of the main stream and tributary.

Enclosed is a copy of where the stream is presently indicated on the map in the stream catalog and its actual location as identified by recent ground surveys and an aerial photo. (The stream and tributary, though joining in the intertidal area, actually drain separate watersheds.) I would like to have this modification submitted for revision.

Though I know we are close to the deadline for additions or revisions (October 16), this information only recently came to light.
